

Advanced Course in the Management of Disaster Victims

October 17th-22nd, 2011

Nicosia – Cyprus

The MSc Course "International Medicine - Health Crisis Management", in cooperation with the Civil Protection Team of Nicosia, Cyprus is offering a six-day intensive course in disaster management especially tailored for Health Care personnel.

During this course, participants will have the opportunity to follow high-level seminars on health interventions in major disasters, while set scenarios under real conditions will give them the opportunity to develop essential skills through hands-on practice:

- Disaster Medical Assistance Team (DMAT) mobilization and deployment
- Search & Rescue operations
- First aid and wound care
- Triage and evacuation
- Treatment of mass casualties
- Media relations
- Public health surveillance in disasters

The course is open to students of the 3rd semester of the MSc Course.
A limited number of additional places are also available for medical doctors, nurses or medical staff with particular interest in Disaster Medicine.

A course diploma will be awarded following examinations.

Welcome address

Dear Colleagues,

It gives me great pleasure to invite you to the first Advanced Course in the Management of Disaster Victims, co-organized by the Civil Defence of Cyprus and the MSc “International Medicine / Health-Crisis Management of Athens University School of Medicine with the participation of the Rescue Team - Civil Defence of Nicosia.

Following many successful conferences on various topics of Disaster Medicine, this first Advanced Course will offer comprehensive and up-to-date knowledge and skills regarding the treatment of casualties from natural disasters, armed conflict and large-scale chemical, biological or radiological events.

During six days, participants will follow keynote lectures on the most sensitive issues involved in managing mass disasters’ casualties, with reference to the most recent complex emergencies, including the recent tragic event on Cyprus, the Earthquake-Tsunami-Nuclear accident in Japan, the Earthquake-Cholera epidemics in Haiti, and the massive displacement of civilians following armed conflicts in Northern Africa and the Arab world.

A number of exercises in coping with austere situations are part of the program, while set scenarios in real conditions will give the participants the opportunity to acquire the skills and experience needed to plan for major events in hospital care as well as in modern search-and-rescue procedures and pre-hospitalization care of victims.

The course will end with a major field exercise organized by the competent Rescue Team - Civil Defence of Nicosia, with the generous support of the Cyprus Civil Defence.

The course is open to medical doctors, nurses or medical staff with particular interest in Disaster Medicine.

We are looking forward to seeing you in Cyprus

Theofilos Rosenberg MD, PhD
Ass. Professor of Surgery
Athens University
Director of the MSc
“International Medicine /Health-Crisis Management”
